Narrative: At 1401 the fire was flown by zone surveillance aircraft N9011N. There were several areas of smoke located within the interior. One area along the southeast corner was more active, burning in tussock tundra and mixed hardwoods. This active area was approximatly 30 acres in size and moving to the northeast into a riparian area. At 1855 zone helicopter 6PF began bucket work on the active corner; 32 buckets were dropped. At 1955 6PF reported the corner was heating up and the water drops were not effective. The helicopter picked up the personnel on the ground and returned to Fort Yukon Station to fuel. 6PF arrived back at the fire at 2148 and put another 42 buckets on the fire. The water drops were effective and the fire was exhibiting smoldering behavior with only 1-2 spots of open flame. 6PF returned to Fort Yukon Station with all personnel. The fire was left in monitor status.
